

Additional comments:

When planning for my kids Birthday parties I always like to do something "different" rather than the norm. And "Mad Science" was definitely different. My son who just turned eight, along with his friends loved it!!! I know for a fact because their moms would later tell me how much of a great time they had at the party! One of my son's friend even asked for a business card at the end of the party!

William, our instructor, was great. He was very energetic + fun. (You have to be when your trying to entertain 13 eight year old boys.) Initially, before the party, my biggest concern was hoping the boys would not get bored but that wasn't the case at all! As soon as William started I knew ^{they} were going to have a great time. I would definitely recommend a mad science Birthday Party!

What I liked most about it is its educational + fun at the same time!
