Dear Ms. Alfieri,

The trip we took to Bethpage was incredible. You told us that some of us pollute, and that we can destroy our atmosphere. Some things I learned when my class went to the Mad Scientist lesson was what pollution does to our world.

Oil spills affect animals, land and humans. Oil spills affect the environment because of careless tankers. Oil spills come from tanks carried on the ocean. Oil spills can get into the animal's skin, and cut off the air to that animal. You showed us pictures of the animals that were affected by the oil spills

You also said air pollution was a problem in our environment. Air pollution affects our environment, atmosphere and our world. We cause air pollution with our factories, chemicals from household cleaners and the exhaust from cars.

I learned a lot from the lesson. I hope you do this again for the kids coming to the 5th grade next year. Thank you for teaching us about pollution and oil spills.

Sincerely,

Nichole Roth

And Mrs. Slutsky 5th grade class!!
