Library Shows

Mad Science world (NEW)

Children will be amazed as they take a trip around the world with our Mad Scientist. Experience the chill of Antarctica with our dry ice experiments, the music of Australia with our swinging sound tubes, the beautiful colors of China with our rainbow maker and much more! Come and experience the wonders of the world firsthand in this interactive and educational show. 45-60 minutes long. Fee is \$299 and a travel fee (typically \$15 per instructor).

Mysteries of Fire and Ice

Discover the cool chemistry in the states of matter and learn the basics of air pressure. Scissors will unexpectedly sizzle and carbon dioxide bubbles will pop as the chilling properties of dry ice are revealed. Be amazed when a ball is suspended over the audience and marvel at the strength of your own lungs with these radical air-pressure experiments. 45-60 minutes long. Fee is \$299 and a travel fee (typically \$15 per instructor).

Soaring Up, Up, and Away

Get ready to be mystified by molecules and amazed by atmospheric pressure in this event on the power of pressure. Witness how an ordinary object becomes a hot-air balloon. Zoom across the floor on the Mad Science hovercraft and discover how energy transforms liquid into an exciting chemical reaction. 45-60 minutes long. Fee is \$299 and a travel fee (typically \$15 per instructor).

Spin, Pop, Boom

You'll be spellbound with these cool experiments in physics and chemistry, from volcanic reactions to spinning centrifugal force demonstrations. Learn about the physical forces and molecular interactions in what we see every day. Observe how chemical reactions make foam shoot up into the air, and how a hand appears to grow. Finally, watch as a swirl of steam, like a genie, dances out of a bottle. 45-60 minutes long. Fee is \$299 and a travel fee (typically \$15 per instructor).
