Mad Science mixes up high-energy birthday bash

Mad Science has been providing birthday parties and other programs since 1985. The goal of Mad Science is to show kids that science is exciting and cool. Mad Science has everything you need to make your child's next birthday an unforgettable experience. Children feel extra special on their birthday when the Mad Scientist arrives at their party. They'll discover the spectacular side of science as they have fun with physics and witness cool chemical reactions. Party guests participate in hands-on science by concocting their own ooey-goey slime. Mad Science parties bring exciting, high energy, interactive shows to your location. They are a hassle-free hour of entertainment and education. Mad Science also offers options of special add-ons like cotton eandy, laser lights, goodie bags and amazing rocket launches.

TRY THIS

EXPERIMENT

You will need:
Water
Freezer
Cooking Oil
Plastic Container

- Pour some water into the plastic container.
- Add some cooking oil.
- Let this sit for a few minutes, until the oil rises to the top of the container. Why does this happen?
- Carefully place the container in the freezer. Leave it there for a few hours.
- Remove the container from the freezer. What does it look like now?

The water (ice) will now be on top of the oil. As water freezes, it expands and becomes less dense than the oil. This causes the water to rise to the top.

Mad Scientist Professor Z dazzles his young audience with demonstrations.

Birthday party guests of Anna Peterson by Mad Scientist Professor Z. Mad Science that come to you. www.madscience.org

Experience the wonder of science with hands-on activities and demonstrations. Mad Science entertains children of all ages with exciting, high-energy, interactive shows. www.madscience.org/scottsdalenphoenix
