

Mad Science Preschool Workshops

30-35 minutes of fun and learning!

Maximum 15 children per workshop

Add perceived value to your program! Parents and children alike will love a monthly visit from Mad Science!

Life

Animal Friends

Go wild learning about the animal kingdom. Bring the safari home with your own animal mask!

Dinosaurs

Want to see some dinosaur teeth up close? Turn your preschoolers into assistant paleontologists with a mini dinosaur dig and make your very own cast of a real dino fossil.

Fluttering Birds

From beak to wingspan, children will learn distinguishing characteristics of birds and their eggs while listening to their melodious songs.

Worms

Children use magnifying glasses to explore the fascinating lifestyle of a worm in one of our most popular programs!

Human Body

Meet Mr. Bones and learn about skeletons, muscles, and body systems while playing "Mr. Bones Says."

Healthy Choices

A fun introduction to basic nutrition. Discover what makes a healthy meal. Kids learn why they need to keep eating fruits and vegetables to grow strong!

Butterflies

Create your own butterfly to take home! Find out where they come from, stages of their growth, and how they eat.

Our Senses

Smell and Taste

"Taste this - it smells sweet!" Preschoolers discover how these two important senses are interconnected.

Eye to Eye

Students use telescopes, binoculars and other scientific equipment to see the world in different ways. We'll examine the parts of the eye and amaze children as we demonstrate the types of tricks that their eyes can play!

Listen Closely

With wave motion model and twirling tube in hand, students will learn how sound travels in waves and hear how sound effects are created from ordinary materials.

Keep in Touch

Children learn "firsthand" how sensitive the tips of their fingers are. Students take home a project that is made using their own sense of touch.

Mirror, Mirror

Children take a look at the world up close as they perform experiments with mirrors and microscopes, and learn about reflection and symmetry.

Science of Music

Join the Mad Science preschool band and learn all about the world of sound and vibration. We will make beautiful music together by tapping, rubbing, plucking, shaking and blowing into instruments.

Exploring Science

Mad Mixtures

Students will experience eruptions of fun and excitement with volcanoes and other simple chemistry experiments.

Shapes and Structures

Learn about different shapes and structures. Experiment with Cool Geoboards and Magnatiles and then build your own Eco-Foam structure to take home.

Color

Introduce your preschoolers to the exciting world of color by experimenting with chemical reactions and rainbows.

How Big? How Much?

Children will be introduced to the concept of estimation and learn about weights and measures using scales and even their own feet!

Magnetic Attraction

Explore the world of magnets through attracting & repelling reactions!

Our Earth and Beyond

Adventures in Air

Feeling the power of air is a breeze with these cool hands-on experiments! Learn about the air all around us.

Sea, Sand, & Surf

Create your own miniature ocean and explore the wonders of sand, shells and sea life.

Water Works

Row...gently down the stream...learn all about the fascinating properties of water by experimenting with floating, sinking, absorption, & much more!

Energy and Motion

Snakes will spring, ribbons will dance, and toys will strut their stuff as your preschoolers learn about the laws of motion.

Space Frontiers

Sign up for our Mad Science Astronaut Training program & explore our fantastic solar system!

Lights On

What is light? Shine some brightness on this subject by mixing colors and exploring the rainbow of light.
